## (54) ARTICLE FOR PREVENTING ADHESION OF STOOL TO HIP

## (57)Abstract:

PURPOSE: To reduce the unpleasant feeling caused by the adhesion of stool to the hip and to prevent the effect of bacteria or waste matter on the skin by constituting the title article of a rectangular sheet composed of specific material quality and having an oval hole provided to the center thereof and a sticking agent composed of specific cream.

CONSTITUTION: This article consists of a rectangular sheet 1 having an oval hole 2 at the center thereof and a sticking agent for bonding said sheet to the hip. The material quality of the sheet 1 is composed of either one of a vegetable fiber, a synthetic fiber, siloxane, collagen and moisture permeable polyethylene. The sticking agent is composed of either one of white vaseline, purified vaseline, hydrophilic vaseline, water absorbable ointment, hydrophilic ointment,

white ointment and O/W type or W/O type cream. The sticking agent is applied to the hip around the anus and the sheet 1 is bonded to the hip so that the center of the oval hole present at the central part of the sheet is positioned at the anus. Subsequently, a diaper 3 made of cloth or paper is put on the hip. By this method, since stool is evacuated between the sheet and the diaper, the direct adhesion of stool to the hip can be prevented.
